SOUNDWAVE® GEO
Acoustic Panel
By Ineke Hans

OFFECCT

PRODUCT INFORMATION

Soundwave® Geo is designed by the well-known furniture designer Ineke Hans. Ineke Hans views Soundwave® Geo as a three-dimensional wall decoration similar to the ones which people have always created around the world. The difference is that Geo has a clear function due to its sound-absorbing purpose.

“People have always wanted to decorate their walls – everywhere and in every era. But we designers have a tendency to pare away the decorative aspect. I wanted to combine Offecct’s sound panels made of felt with a geometric pattern that is decorative but can also function on the large scale with many panels in rows without looking too cluttered. Quite simply, a combination of tradition and modern design,” says Ineke Hans.

TECHNICAL INFORMATION

Available for the United States market.

Geo is designed to be used as lightweight sound absorbers in the frequency range 250 Hz and above. These panels help reduce disturbing reflections of environmental sounds such as voices, telephones etc. Recyclable moulded polyester fibre in anthracite, grey and offwhite.

ACCESSORIES

Seperate filling made of recycled textile and PET. Basfill is being placed inside the Soundwave panels in order to improve sound absorption in the lower frequency range (150-500 Hz). Basfill is available as accessories to all panels exept for Luna and Pix.

This product is available in an eco-labeled performance, certified by the Nordic Ecolabel and/or Möbelfakta.
By choosing this product you make a difference towards a better environment.

SOUNDWAVE® LUNA
Acoustic Panel
By Teppo Asikainen

OFFECCT

PRODUCT INFORMATION

Soundwave® Luna is designed by Teppo Asikainen. Luna is one of the first acoustic panels in the successful Soundwave® series. Its designed to absorb sound in the lower frequencies.

TECHNICAL INFORMATION

Available for the United States market.

Soundwave® Luna is a heavyweight broadband absorber with extended efficiency in the low frequency range (150 Hz-500 Hz). This panel is very efficient in reducing the reverberation time (sound "bouncing around") in a room. This means that disturbing background noise will be reduced and voice intelligibility will be greatly improved. Recyclable moulded polyester fiber, with plastic back plate, in offwhite and grey.
